1. Document EP-A-1 162 394 (D1), which is regarded as the closest prior art, discloses a sealing arrangement for hydraulic pistons or piston rods, comprising a grooved ring (10) made from a tough-resilient plastic (claims 14 - 16), a stationary machine part (14) and a movable machine part (34) with an outer radius (D_L), the grooved ring (10) being arranged with radial pre-tensioning in a profiled section of the stationary machine part (14) to act as a contacting seal between the stationary machine part (14) and the movable machine part (34), the grooved ring having on the high-pressure side a radially outer and a radially inner sealing lip (66 and 20, 22), the stationary and the movable machine parts (14, 34) being distanced on the low-pressure side by a sealing gap (figure 6) with a sealing gap width that is not specified in detail, a contact surface (12) of the grooved ring (10) on the low-pressure side fitting against a radially oriented portion (figure 6) of the profiled section, the grooved ring (10, 18) having an inner and an outer radius, the inner radius of the grooved ring (10, 18) in

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

the area of the contact surface (12) being greater than the sum of D_L and the sealing gap in both the pressure-less and the pressurised states (see figure 6).

2. The problem addressed by the invention is specified in the first paragraph on page 3 of the description.
3. The solution to the problem as per the characterising part of claim 1 consists in providing lubrication pockets in the form of recesses on the inner side facing the moving machine element, said recesses extending axially from the low-pressure side. The requirements of PCT Article 33(2) and (3) thus appear to be satisfied, since this combination of features is neither disclosed nor suggested by document D1, even in combination with the other documents listed in the search report.

Claims 2-8

4. The remaining claims are dependent on claim 1 and essentially define the technical configuration and alternative embodiments. Those claims therefore also appear to meet the requirements of PCT Article 33(2) and (3).
5. Industrial applicability is obvious.
